The Nine Chapters on the Mathematical Art is a classic text: the most important mathematical source in China during the past 2000 years, and comparable in significance to Euclid's Elements in the West. This volume contains the first complete English translation of the Nine Chapters, together with two commentaries written in the 3rd and 7th centuries AD, and a further commentary by the translators. The Nine Chapters contains 246 problems and their solutions, which fall into nine categories that are firmly based on practical needs. There are methods for solving problems in areas such as land measurement, construction, agriculture, commerce, and taxation. The Chinese commentators provided the algorithms needed to solve the problems, and explanations of how the algorithms work. The translators' commentary provides clear and accessible background material for the Western reader, explanations of technicalities, and notes on the treatment of similar or identical mathematical problems in other countries. The Nine Chapters quickly acquired a distinguished reputation, and was the standard mathematics textbook in China and the surrounding regions until Western science was introduced in about 1600. This English translation gives the reader an idea of the distinctive style and important contributions of traditional Chinese mathematics. Since the 1979 Revolution in Iran and the end of a close relationship between the US and the Shah, successive American administrations – including the Obama Administration – have tried to contain Iran by various means, particularly sanctions and military threats. Even though President Obama came to office promising to engage Iran, in reality his administration has followed the policy of “tough diplomacy,” which has included, among other acts, imposing draconian sanctions against Iran. Following the author's earlier book on the history of containment of Iran and Iraq, the current book examines closely the Obama Administration's policy toward Iran, as well as the role played by Israel, the European Union and the International Atomic Energy Agency (IAEA) in the implementation of this policy. Specifically, it is argued that the policy of “tough diplomacy,” designed mostly by those associated with the Israeli lobby groups, was intended to give an ultimatum to Iran in some direct meetings, telling Iran to either accept the US-Israeli demands or face aggression. The meetings were also intended to create the illusion of engaging Iran in order to gain international support for aggressive actions. Barack Obama announced this policy in his speeches as a Senator, particularly at the American Israel Public Affairs Committee policy conferences. After he became president in 2008, the policy of “aggressive diplomacy” was put in motion. While pretending to engage Iran in diplomacy, the Obama Administration, in coordination with the US Congress and the government of Israel, pushed for the most confrontational IAEA reports on Iran and an unprecedented set of unilateral and multilateral sanctions. The US and Israel also engaged in a campaign of military threats, sabotage and assassination of Iranian nuclear scientists. Yet, after four years of hostilities, the policy of “tough diplomacy” failed to achieve many of its goals and failed to contain Iran. 1.
