Market: energy professionals including analysts, system engineers, mechanical engineers, and electrical engineers Problems and worked-out equations use SI units This book introduces readers to hydrogen as an essential energy carrier for use with renewable sources of primary energy. It provides an overview of the state of the art, while also highlighting the developmental and market potential of hydrogen in the context of energy technologies; mobile, stationary and portable applications; uninterruptible power supplies and in the chemical industry. Written by experienced practitioners, the book addresses the needs of engineers, chemists and business managers, as well as graduate students and researchers. This volume contains the proceedings of the 11th KES International Conference on Sustainability and Energy in Buildings 2019 (SEB19) held in Budapest, 4th -5th July 2019 organised by KES International in partnership with Cardiff Metropolitan University, Wales, UK. SEB-19 invited contributions on a range of topics related to sustainable buildings and explored innovative themes regarding sustainable energy systems. The aim of the conference was to bring together researchers, and government and industry professionals to discuss the future of energy in buildings, neighbourhoods and cities from a theoretical, practical, implementation and simulation perspective. The conference formed an exciting chance to present, interact, and learn about the latest research and practical developments on the subject. The conference attracted submissions from around the world. Submissions for the Full-Paper Track were subjected to a blind peer-review process. Only the best of these were selected for presentation at the conference and publication in these proceedings. It is intended that this volume provides a useful and informative snapshot of recent research developments in the important and vibrant area of Sustainability in Energy and Buildings. The Chemistry of the Actinide and Transactinide Elements is a contemporary and definitive compilation of chemical properties of all of the actinide elements, especially of the technologically important elements uranium and plutonium, as well as the transactinide elements. In addition to the comprehensive treatment of the chemical properties of each element, ion, and compound from atomic number 89 (actinium) through to 109 (meitnerium), this multi-volume work has specialized and definitive chapters on electronic theory, optical and laser fluorescence spectroscopy, X-ray absorption spectroscopy, organoactinide chemistry, thermodynamics, magnetic properties, the metals, coordination chemistry, separations, and trace analysis. Several chapters deal with environmental science, safe handling, and biological interactions of the actinide elements. The Editors invited teams of authors, who are active practitioners and recognized experts in their specialty, to write each chapter and have endeavoured to provide a balanced and insightful treatment of these fascinating elements at the frontier of the periodic table. Because the field has expanded with new spectroscopic techniques and environmental focus, the work encompasses five volumes, each of which groups chapters on related topics. All chapters represent the current state of research in the chemistry of these elements and related fields. Everything you wanted to know about industrial gas turbines for electric power generation in one source with hard-to-find, hands-on technical information. Covering basic theory, components, installation, maintenance, manufacturing, regulation and industry developments, Gas Turbines: A Handbook of Air, Sea and Land Applications is a broad-based introductory reference designed to give you the knowledge needed to succeed in the gas turbine industry, land, sea and air applications. Providing the big picture view that other detailed, data-focused resources lack, this book has a strong focus on the information needed to effectively decision-make and plan gas turbine system use for particular applications, taking into consideration not only operational requirements but long-term life-cycle costs in upkeep, repair and future use. With concise, easily digestible overviews of all important theoretical bases and a practical focus throughout, Gas Turbines is an ideal handbook for those new to the field or in the early stages of their career, as well as more experienced engineers looking for a reliable, one-stop reference that covers the breadth of the field. Covers installation, maintenance, manufacturer's specifications, performance criteria and future trends, offering a rounded view of the area that takes in technical detail as well as well as industry economics and outlook Updated with the latest

industry developments, including new emission and efficiency regulations and their impact on gas turbine technology Over 300 pages of new/revised content, including new sections on microturbines, non-conventional fuel sources for microturbines, emissions, major developments in aircraft engines, use of coal gas and superheated steam, and new case histories throughout highlighting component improvements in all systems and sub-systems. This issue of the Digest of United Kingdom Energy Statistics (DUKES) is part of a series and updates the figures given in DUKES 2012. The publication consists of seven chapters; the first chapter deals with overall energy, with the other chapters covering specific fuels (solid fuels and derived gases, petroleum, natural gas, electricity), combined heat and power and renewable sources of energy. The statistics presented in this digest will generate widespread interest from anyone working within or with an interest in energy sources, consumption and climate change. Chapters covering specific fuels and renewable sources of energy contain details on the production and consumption of individual fuels, presented using commodity balances. A commodity balance illustrates the flow of a fuel through from production to final consumption. These individual commodity balances are also combined in an energy balance, showing the interaction between different fuels. General energy stat "Over the past decade, Kyrgyzstan has developed a raft of youth policies, but few of these seem to genuinely improve young people's access to information, rights, and opportunities. Too many of the laws, regulations, and conceptual documents have been reactive: off-the-cuff responses to political events—particularly, young people's participation in the popular uprisings that overthrew two presidents—rather than the enactment of a strategic vision. Worse still, many policies exist on paper only, without effective mechanisms to achieve their stated aims."--publisher website. Mari Ruti combines theoretical reflection, cultural critique, feminist politics, and personal experience to analyze the prevalence of bad feelings in contemporary everyday life. Proceeding from a playful engagement with Freud's idea of penis envy, Ruti's autotheoretical commentary fans out to a broader consideration of neoliberal pragmatism. She focuses on the emphasis on good performance, high productivity, constant self-improvement, and relentless cheerfulness that characterizes present-day Western society. Revealing the treacherousness of our fantasies of the good life, particularly the idea that our efforts will eventually be rewarded—that things will eventually get better—Ruti demystifies the false hope that often causes us to tolerate an unbearable present. Theoretically rigorous and lucidly written, *Penis Envy and Other Bad Feelings* is a trenchant critique of contemporary gender relations. Refuting the idea that we live in a postfeminist world where gender inequalities have been transcended, Ruti describes how neoliberal heteropatriarchy has transformed itself in subtle and stealthy, and therefore all the more insidious, ways. Mobilizing Michel Foucault's concept of biopolitics, Jacques Lacan's account of desire, and Lauren Berlant's notion of cruel optimism, she analyzes the rationalization of intimacy, the persistence of gender stereotypes, and the pornification of heterosexual culture. Ruti shines a spotlight on the depression, anxiety, frustration, and disenchantment that frequently lie beneath our society's sugarcoated mythologies of self-fulfillment, romantic satisfaction, and professional success, speaking to all who are concerned about the emotional costs of the pressure-cooker ethos of our age. For decades, BP and Shell extracted the minerals, finance and skills of the UK. Always behind the scenes, Big Oil drove Britain's economy and profoundly influenced its culture. Then, at the start of the 21st Century, the tide seemed to go out - Britain's refineries and chemical plants were quietly closed; the North Sea oilfields declined. Now, while the country goes through the seismic upheavals of Brexit and the climate emergency, many believe the age of oil to be almost passed. However, as *Crude Britannia* reveals, reports of the industry's death are greatly exaggerated. Taking the reader on a journey across Britain - from North East Scotland, Merseyside and South Wales to the Thames Estuary and London - James Marriott and Terry Macalister tell the story of Britain's oil-stained past, present and future; of empire, economic deprivation and continuing political influence. The authors speak to oil company executives and oil traders, as well as former shipyard and refinery workers, film makers and musicians, activists and politicians, putting real people and places at the heart of a compelling political analysis. Offering a rare insight on how to read the history of modern Britain, *Crude Britannia* shows what needs to be done to create a new energy system, that tackles climate change and underpins a fairer democratic society. Vols. for 1977- include a section: Turbomachinery world news, called v. 1- Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database. The focus of this book is issues management and why it should play a key role in strategic planning, supporting the organization in its interface with public policy, public opinion, and opinion formers.
