With his trademark compassion and erudition, Dr Oliver Sacks examines the power of music through the individual experiences of patients, musicians, and everyday people. Among them: a surgeon who is struck by lightning and suddenly becomes obsessed with Chopin; people with 'amusia', to whom a symphony sounds like the clattering of pots and pans; and a man whose memory spans only seven seconds - for everything but music. Dr Sacks describes how music can animate people with Parkinson's disease who cannot otherwise move, give words to stroke patients who cannot otherwise speak, and calm and organize people who are deeply disoriented by Alzheimer's or schizophrenia. Musicophilia alters our conception of who we are and how we function, and shows us an essential part of what it is to be human. In recent years there have been tremendous advances in understanding how brain development underlies behavioural changes in adolescence. Based on the latest discoveries in the research field, Eveline A. Crone examines changes in learning, emotions, face processing and social relationships in relation to brain maturation, across the fascinating period of adolescent development. This book covers new insights from brain research that help us to understand what happens when children turn into adolescents and then into young adults. Why do they show increases in sensation-seeking, risk-taking and sensitivity to opinions of friends? With the arrival of neuroimaging techniques, it is now possible to unravel what goes on in an individual's brain when completing cognitive tasks, when playing computer games, or when engaging in online social interactions. These findings help reveal how children learn, control thoughts and actions, plan activities, control emotions and think about intentions of others, offering a new perspective on behaviour and motivations of adolescents. This is the first comprehensive book to cover the many domains of adolescent brain development, stretching from cognitive to affective to social development. It is valuable reading for students and researchers in the field of adolescent development and developmental cognitive neuroscience and those interested in how the developing brain affects behaviour in the teenage years. This book examines the nature and causal antecedents of superior memory performance. The main theme is that such performance may depend on either specific memory techniques or natural superiority in the efficiency of one or more memory processes. Chapter 2 surveys current views about the structure of memory and discusses whether

common processes can be identified which might underlie general variation in memory ability, or whether distinct memory subsystems exist, the efficiency of which varies independently of each other. Chapter 3 provides a comprehensive survey of existing evidence on superior memory performance. It examines techniques which underlie many examples of unusual memory performance, and concludes that not all this evidence is explicable in terms of such techniques. Relations between memory ability and other cognitive processes are also discussed. The remainder of the book describes the authors' own studies of a dozen memory experts, employing a wide variety of short- and long-term memory tasks. These studies provide a much larger body of data than previously available from studies of single individuals, usually restricted to a narrow range of tasks and rarely involving any systematic study of long-term retention. The authors argue that in some cases unusual memory ability is not dependent on the use of special techniques. They develop some objective criteria for distinguishing between subjects who demonstrate "natural" superiority and those "strategists" who depend on techniques. Natural superiority was characterised by superior performance on a wider range of tasks and better long-term retention. The existence of a general memory ability was further supported by a factor analysis of data from all subjects, omitting those who described highly-practised techniques. This analysis also demonstrated the independence of initial encoding and retention processes. The monograph raises many interesting questions concerning the existence and nature of individual differences in memory ability (a previously neglected topic), their relation to other cognitive processes and implications for theories concerning the structure of memory. "This Student's Book with answers contains separate sections focussing on Reading, Writing, Listening and Speaking ; 8 official practice tests from Cambridge English ; DVD-ROM with MP3 files and speaking test videos."--Publisher. This book offers insights from a seven-year study into the impact of English as an International Language at a national level, from the effect of rich English input on a previously monolingual people's linguistic repertoire to its effect on the situated language use demanded of speakers who find themselves in a new linguistic environment for which they have not been prepared. The changes described in the book have occurred in a speech community that identifies strongly with the local language, but finds itself increasingly having to use another language to perform daily functions in education and work. Findings describe how the official language and educational policies have not addressed this new linguistic ecology of Iceland. The findings of these studies have larger international practical, educational, empirical, and theoretical implications and should be relevant to anyone interested in in the impact of English as an International Language. Prepare yourself for the IELTS exam using Collins Practice Tests for IELTS Book 2 Shortlisted for the Royal Society Winton Prize 2013 and the 2013 Best Book of Ideas Prize. Memory is an essential part of who we are. But what are memories, and how are they created? A new consensus is emerging among cognitive scientists: rather than possessing a particular memory from our past, like a snapshot, we construct it anew each time we are called upon to remember. Remembering is an act of narrative as much as it is the product of a neurological process. Pieces of Light illuminates this theory through a collection of human stories, each illustrating a facet of memory's complex synergy of cognitive and neurological functions. Drawing on case studies, personal experience and the latest research, Charles Fernyhough delves into the memories of the very young and very old, and explores how amnesia and trauma can affect how we view the past. Exquisitely written and meticulously researched, Pieces of Light blends science and literature, the ordinary and the extraordinary, to illuminate the way we remember and forget. Don't just trust to luck in your IELTS exam - the key is practice! IELTS Material.COM At the outset of the twentieth century, malaria was Italy's major public health problem. It was the cause of low productivity, poverty, and economic backwardness, while it also stunted literacy, limited political participation, and undermined the army. In this book Frank Snowden recounts how Italy became the world center for the development of malariology as a medical discipline and launched the first national campaign to eradicate the disease. Snowden traces the early advances, the setbacks of world wars and Fascist dictatorship, and the final victory against malaria after World War II. He shows how the medical and teaching professions helped educate people in their own self-defense and in the process expanded trade unionism, women's consciousness, and civil liberties. He also discusses the antimalarial effort under Mussolini's regime and reveals the shocking details of the German army's intentional release of malaria among Italian civilians—the first and only known example of bioterror in twentieth-century Europe. Comprehensive and enlightening, this history offers important lessons for today's global malaria emergency.
