Cyprinids rank as one of the most commercially important groups of freshwater fishes and are exploited for many purposes; as a human food source, especially in Europe and Asia; as sport fish; and as ornamental fish for ponds and aquaria. Certain species are also cultured as bait fish and several of the small cyprinids such as the zebra fish have become internationally accepted laboratory models for toxicology testing and molecular research. A thorough understanding of cyprinid health and diseases is fundamental to the successful management and exploitation of these fishes for freshwater fisheries, pisciculture and ornamental productions. This practical guide to disease diagnosis, prevention and control includes numerous colour plates and covers a comprehensive array of diseases - infectious and non-infectious - of cultivated and wild cyprinids. *Beards and Texts* explores the literary portrayal of beards in medieval German texts from the mid-twelfth to the early sixteenth centuries. It argues that as the pre-eminent symbol for masculinity the beard played a distinctive role throughout the Middle Ages in literary discussions of such major themes as majesty and humanity. At the same time beards served as an important point of reference in didactic poetry concerned with wisdom, teaching and learning, and in comedic texts that were designed to make their audiences laugh, not least by submitting various figure-types to the indignity of having their beards manhandled. Four main chapters each offer a reading of a work or poetic tradition of particular significance (Pfaffe Konrad's *Rolandslied*; Wolfram von Eschenbach's *Willehalm*; 'Sangspruchdichtung'; Heinrich Wittenwiler's *Ring*), before examining cognate material of various kinds, including sources or later versions of the same story, manuscript variants and miniatures and further relevant beard-motifs from the same period. The book concludes by reviewing the portrayal of Jesus in vernacular German literature, which represents a special test-case in the literary history of beards. As the first study of its kind in medieval German studies, this investigation submits beard-motifs to sustained and detailed analysis in order to shed light both on medieval poetic techniques and the normative construction of masculinity in a wide range of literary genres. *Discovery in Haste* is the first book to survey the English printed medical dictionary, a greatly under-researched area, from Andrew Boorde's *Breviary of Helthe* of 1547 to Benjamin Lara's surgical dictionary of 1796. The book begins with Andrew Boorde's *Breviary of Helthe* of 1547, moves on to medical glossaries, which were produced through the whole period, the 'physical dictionaries' of the mid-seventeenth century which first employed 'dictionary' in the title, the translation into English of Steven Blancard's dictionary, Latin medical dictionaries of the late seventeenth century by Thomas Burnet and John Cruso, the influential dictionary by John Quincy which dominated the eighteenth century, surgical dictionaries through to that by Benjamin Lara, Robert James's massive encyclopaedic dictionary and the work derived from it by John Barrow, as well as George Motherby's dictionary of 1775. The characteristics of each are discussed and their inter-relationships explored. Attention is also paid to the printing history and the way the publishers influenced the works and, where appropriate, to the influence each had on succeeding dictionaries. This book is the first to locate medical dictionaries within the history of lexicography. This comprehensive book focuses on eyelid, lacrimal and orbital lesions, covering a wide variety of common and rare diseases and correlating their clinical, radiological and pathological aspects. It presents a large number of illustrative cases, with a discussion of the clinical history, examination, the imaging and pathology findings, differential diagnosis and management along with a take home message for each. Further, it offers clear guidance on the diagnosis and management of orbital and adnexal lesions. This book is a valuable learning tool for residents and trainee fellows in ophthalmology, as well as for trainees in radiology and pathology. It is also relevant to young ophthalmic plastic and reconstructive surgeons, practicing ophthalmologists, radiologists, and pathologists. We participate in moral debate, instead of taking established morality for granted, because of our discontent with the moral discourse already existing. We feel that something is distorted or concealed, that something

remains to be said. One of the strategies to expose the deficiencies of established discourse is critical argument, but under certain specific historical circumstances, the apparent self-evidence of established moral discourse has gained such a dominance, has acquired such an ability to conceal its basic vulnerability, that its validity simply seems beyond contestation. Notwithstanding our discontent, we remain unable to challenge the established truth effectively. Then, all of a sudden, its vulnerability is revealed - and this is the experience of laughter. Moral criticism is preceded by laughter. In fact, all crucial transformations that emerged in the history of morality were accompanied by and made possible by laughter and moral criticism is basically and originally a comic genre. After drawing an outline of the present moral regime in chapter one, the moral significance of laughter is recovered with the help of four 'philosophers of laughter' in chapter two, namely Bakhtin, Nietzsche, Bataille and Foucault. Laughter allows reality to appear in a certain light, it contains a basic truth, it is a philosophical principle in its own right that cannot be reduced to or identified with the truth of science. In the subsequent chapters it is shown how three crucial moral transformations, occurring in the fourth century B.C., the sixteenth century A.D. and the nineteenth century A.D. evolved out of an experience of laughter, articulated by three outstanding protagonists of laughter presented in this book: Socrates, Luther and Ibsen. Finally, the significance of the experience of laughter in view of the present is discussed.

The Brooklyn described and pictured here is a complicated and contradictory place. With a long history of racial and economic segregation and waves of gentrifications, Brooklyn is now considered one of America's hippest places. Most of the women who have shared their stories in the pages that follow have lived in Brooklyn all their lives, in neighborhoods like East New York, Bushwick, Brownsville, which have only recently begun to experience the beginnings of gentrification. A majority of residents in these neighborhoods are and have long been people of color. There is higher concentration of people living poverty there than in other parts of the city. The health implications of this structural inequality mean that certain zip codes hold the greatest concentration of people living with HIV/AIDS in Brooklyn. This textbook presents a comprehensive overview of the environmental impacts of various types of adventure tourism and how

these can be best managed. This volume follows on from the authors previous textbook – ‘Outdoor Recreation: Environmental Impacts and Management’ and continues the aim of developing a deeper understanding of how tourist numbers impact the environment and to provide practical solutions to these problems. Combining their own first-hand experience and research with extensive literature review the authors' present several popular adventure tourism destinations from across the globe, including the Arctic, the Himalayas, Africa, Australia and Scotland as case studies. Chapters cover the particular challenges faced by each region: including impacts on animals and birds; the spread of invasive plant species and diseases; trail impacts on vegetation; impacts on geological, historical and archaeological sites and pollution and waste issues. A discussion and evaluation of the possible management actions for minimising these impacts and how outdoor recreation tourists can be regulated concludes each chapter. This practical and engaging textbook will be invaluable to students and scholars of adventure tourism and outdoor recreation as well as practitioners and managers working in the field. There is perhaps no area of neuro-ophthalmology that is advancing more rapidly with respect to an understanding of its anatomy and physiology than the ocular motor system. For this reason, it is difficult not only to keep up with the latest information concerning the basic mechanisms involved in the control of eye movements but also to remain up to date regarding the pathophysiology of specific disorders of eye movement. The material in this book is derived from a two-day course on eye movements held in The Netherlands in 1986. The course was designed as an introduction to the normal ocular motor system and to disorders of eye movements and was aimed toward orthoptists, ophthalmologists, optometrists, neurologists, and neurosurgeons. The chapters in this book were compiled by a trio of experts in the field of eye movements and contain discussions of anatomy and physiology of the ocular motor system, techniques of examination of patients with diplopia, and pathophysiology of specific disorders of ocular motility. Many of the authors of these chapters are among the most active investigators of eye movements in the world today, and their comments thus reflect the latest information in the field. This text is both basic and comprehensive and thus has something for everyone, from the student just beginning a study of the ocular motor system to the seasoned 'veteran' who wishes to know the latest information regarding central ocular motor control mechanisms.
