Drawing from government data, legislative history, Supreme Court decisions, survey results, and the 2006 reauthorization debate, *When the Letter Betrays the Spirit* examines how executive and judicial discretion facilitates violations of the Voting Rights act. Connecting Johnson to

Obama, the book challenges the executive-centered model of leadership and proffers a Congress-centered approach to protecting voting rights. This approach would both satisfy the goals of the black civil rights movement and give fuller support to the Fifteenth Amendment. Over the last two decades, several textbooks, research papers, and best practice cases have been published on supply chain management. However, globalization has created dispersed supply chains which are vulnerable and dependent on entities and factors that are exogenous to the supply chain. Resource scarcity, environmental regulations, government policies, political unrest, economic instability, and natural disasters are a few examples of how non-supply chain factors influence the way supply chains are managed. These exogenous factors are not just risk sources but can also be venues for innovation and growth. This book presents the notion of supply chain ecosystem to holistically model all the factors that interact with the supply chain and influence the flow of goods, information, and finance. Through a number of real-life case studies, the authors use the ecosystem framework to study the governance, risk, innovation, and performance issues in supply chain management, and also to redesign the management techniques for global supply chains. In doing so, this book makes a unique contribution to the theory and practice of supply chain networks.

Throughout the early twentieth century, waves of migration brought working-class people to the outskirts of Buenos Aires. This prompted a dilemma: Where should these restive populations be situated relative to the city's spatial politics? Might housing serve as a tool to discipline their behavior? Enter Antonio Bonet, a Catalan architect inspired by the transatlantic modernist and surrealist movements. Ana María León follows Bonet's decades-long, state-backed quest to house Buenos Aires's diverse and fractious population. Working with totalitarian and populist regimes, Bonet developed three large-scale housing plans, each scuttled as a new government took over. Yet these incomplete plans—Bonet's dreams—teach us much about the relationship between modernism and state power. Modernity for the Masses finds in Bonet's projects the disconnect between modern architecture's discourse of emancipation and the reality of its rationalizing control. Although he and his patrons constantly glorified the people and depicted them in housing plans, Bonet never consulted them. Instead he succumbed to official and elite fears of the people's latent political power. In careful readings of Bonet's work, León discovers the progressive erasure of surrealism's psychological sensitivity, replaced with an impulse, realized in modernist design, to contain the increasingly empowered population. This report from the second Strategic Highway Research Program (SHRP 2), which is administered by the Transportation Research Board of the National Academies, documents the development of standardized approaches to designing and constructing complete bridge systems for rapid renewals. Since the mid 1970s, there has been an extraordinary renewal of interest in early modern architecture, both as a way of gaining insight into contemporary architectural culture and as a reaction to neoconservative postmodernism. This book undertakes a critical reappraisal of the notion of modernity in Mexican architecture and its influence on a generation of Mexican architects whose works spanned the 1920s through the 1960s. Nine essays by noted architects and architectural historians cover a range of topics from broad-based critical commentaries to discussions of individual architects and buildings. Among the latter are the architects Enrique del Moral, Juan O'Gorman, Carlos Obregón Santacilia, Juan Segura, Mario Pani, and the campus and stadium of the Ciudad Universitaria in Mexico City. Relatively little has been published in English regarding this era in Mexican architecture. Thus, Modernity and the Architecture of Mexico will play a groundbreaking role in making the

underlying assumptions, ideological and political constructs, and specific architect's agendas known to a wide audience in the humanities. Likewise, it should inspire greater appreciation for this undervalued body of works as an important contribution to the modern movement. The National Institute for Occupational Safety and Health (NIOSH) conducts construction-relevant research activities. From 1996 through 2005, the program focused on four research goals: reducing traumatic injuries and fatalities; reducing exposure to health hazards; reducing major risks associated with musculoskeletal disorders; increasing the understanding of construction industry attributes and factors for improving health and safety outcomes. In this book, the National Research Council evaluates the relevance and impact of the NIOSH Construction Research Program in terms of its research priorities and its connection to improvements in the protection of workers in the workplace. It also assesses the program's identification and targeting of new research areas, to identify emerging research issues, and to provide advice on ways that the program might be strengthened. The book finds that the efforts of the Construction Research Program have made meaningful contributions to improving construction worker safety and health, and provides overreaching and specific recommendations for continuing progress. While NIOSH cannot set and enforce research-based standards on its own, the program can be expected to help reduce construction workplace fatalities, injuries, and illnesses through its research, its research dissemination, and transfer into practice. At head of title: National Cooperative Highway Research Program. The Congressional Record is the official record of the proceedings and debates of the United States Congress.
